Todo App

Please create a React application and push it to your public Git repository.

The UI of the app should follow this design:
https://www.figma.com/file/3CJh1KDBSXHzUqqN3THmcD/Todos?node-id=0%3A1.

You may opt to sign in/up to Figma in order to access an inspect mode, which allows you to see style properties to use for your development.

The app must be capable of doing the followings:

1. Add task
2. Edit task
3. Delete task
4. Mark as done
5. See what's done
6. Show progress (e.g. 40% done)

Requirements

1. React based.
2. Use TypeScript.
3. Connect with API (https://github.com/datawowio/todos-json-server).
4. You cannot use CSS frameworks (e.g. Bootstrap, Tailwind, etc.). Please create your own layout using CSS-in-JS, or SCSS.
5. Make a layout with CSS grid, or CSS Flexbox.
6. Bug-free, look as close to the design as possible.

Bonus points (expected for senior role)

1. Use React Hooks.
2. Use any State Management library (e.g. Redux, React Context API, or MobX).
3. User friendly and smooth UX/UI.
4. Make it responsive.
5. Add test (Optional).
